

ELECTRONICS
DESIGN & MANUFACTURE OF ELECTRONICS SOLUTIONS

CAMIS has offered customers an in-house design, manufacture and distribution business over many years of service to the components community.

WE ARE PLEASED TO ANNOUNCE AN ADDITIONAL SERVICE...

A TOTAL SYSTEM INTEGRATION SERVICE

Teaming up with IDEC, CAMIS is now able to provide customers with complete systems solutions.

FOCUSED MARKETS

Components have changed and new control systems have been developed over the period of time that **CAMIS** has been manufacturing, enabling us to offer our customers a greater range of control solutions than was previously available.

These include programmable controllers, A.C. solid state soft starters and variable speed drives, any of which can be supplied as a single control item or combined with other equipment to form a complete control system.

CAMIS engineers are available to discuss control systems with potential customers and advise on possible control methods.

In most instances **CAMIS** produce schematic diagrams and layout drawings from either discussions with customers or from their written specifications.

When approved, the diagrams are issued for manufacture and liaison is maintained with customers during the course of producing the control panel.

CAMIS is an integrated distributor of automation, control, motion and pneumatic products as well as value added services to provide solutions for end user and original equipment manufacturer applications. CAMIS offers the highest level of service and technical expertise to save you time and money.
