

ELECTRONICS
DESIGN & MANUFACTURE OF ELECTRONICS SOLUTIONS

CASE STUDY

COMPLEX WIRING HARNESSSES FOR MOTOR VEHICLES

Camis has 30 years' experience supplying cable assemblies - from simple cut and stripped wires to value added projects; from reworking far-east produced cord sets to complex vehicle wiring looms.

Working with customers drawings, Camis produces bespoke assembly jigs and test boxes ensuring all looms are 100% functionally tested to specified standards. Continuing investment in the latest cable preparation equipment allows Camis to offer high quality, cost effective solutions for all cable requirements. The illustrated example is a wiring loom for an agricultural vehicle which interfaces an electronic control system to hydraulic valves.
